

Khoi Viet Nguyen

Infrastructure Engineer

PROFESSIONAL SUMMARY

CKA Certified Cloud Operations Engineer with 1 year of experience in ensuring high availability, reliability, and performance of production systems. Shifting my focus to Kubernetes-based environments while leveraging strong cloud efficiency and automation skills. Hands-on with working with CI/CD pipelines, Infrastructure as Code (Terraform, Ansible), Docker, Kubernetes, monitoring (Prometheus & Grafana), and scripting

WORK EXPERIENCE

AUTOMATION ENGINEER

Oct 2025 — Present

Accenture

Ho Chi Minh City

- Delivered support across multiple project streams, improving operational reliability through automation-first execution.
- Implemented ticket workload automation using an internal automation platform.
- Built Python-first automation (Bash as needed) to standardize reporting, monitoring, and operational runbooks.
- Built Python automation leveraging AWS/Azure/GCP APIs and SDKs to query resources, collect operational data, and generate reports.
- Improved and optimized existing pipelines, reducing runtime by 75%.

L2 INFRASTRUCTURE SUPPORT

May 2025 — Oct 2025

Accenture

Ho Chi Minh City

- Operated and supported production cloud infrastructure across Alibaba Cloud (Alicloud), Microsoft Azure, and VMware, with a primary focus on virtual machine-based workloads.
- Managed the full VM lifecycle including provisioning, configuration, maintenance, migration, and decommissioning.
- Ensured SLA and service availability by proactively monitoring systems, responding to alerts, and resolving incidents within defined timelines.
- Built and deployed virtual machines using Terraform, ensuring consistent, repeatable, and auditable infrastructure provisioning.
- Automated configuration management and operational tasks using Ansible, including system configuration and password/credential management.
- Collaborated closely with internal teams (cloud, security, application, and service management) to maintain stable and compliant environments.

QA AUTOMATION ENGINEER INTERN

Aug 2024 — Nov 2024

KMS Technology

Ho Chi Minh City

- Automated test cases for multiple web-portal workloads using Playwright with TypeScript.
- Applied software engineering best practices.

EDUCATION

BACHELOR OF ENGINEERING IN SOFTWARE ENGINEERING

Sep 2021 - Mar 2025

University Of Economics Ho Chi Minh City

Ho Chi Minh City

SKILLS

System administration (Unix, Window), containerization and orchestration technologies (Docker, Kubernetes, Helm), Scripting (Python, Bash), Configuration management (Ansible), Infrastructure as Code (Terraform), Monitoring (Prometheus, Grafana), Incident management and RCA, Working with ITSM tools (Spirit, ServiceNow, Jira), CI/CD pipelines (Github actions), Problem solving , Cloud technologies (AWS, GCP).

CERTIFICATIONS

CKA: CERTIFIED KUBERNETES ADMINISTRATOR <i>The Linux Foundation</i>	Apr 2026 — Apr 2028
HASHICORP TERRAFORM ASSOCIATE <i>HashiCorp</i>	Jul 2025 — Jul 2027
GCP ASSOCIATE CLOUD ENGINEER <i>Google</i>	Jul 2025 — Jul 2028
AWS CERTIFIED CLOUD PRACTITIONER <i>AWS</i>	Feb 2025 — Feb 2028

SIDE PROJECT

HOME LAB & NETWORK INFRASTRUCTURE PERSONAL PROJECT	Apr 2026 — Present
---	---------------------------

- Engineered a multi-site network across a primary residence and two rental units, implementing VLAN segmentation for tenant isolation, traffic control, and centralized management.
- Deployed and maintained a Proxmox hypervisor configured to production standards, hosting a fully virtualized Talos Linux Kubernetes cluster provisioned via Terraform.
- Implemented Cilium as the cluster CNI, leveraging eBPF for high-performance networking and enforcing network policies at the kernel level.
- Integrated Longhorn for cloud-native distributed block storage, enabling persistent volume lifecycle management across cluster nodes.
- Managed network infrastructure end-to-end using a self-hosted Omada Controller, overseeing switch configuration, VLAN routing, and wireless access point orchestration.
- Established a full observability stack with Prometheus and Grafana, delivering real-time visibility into cluster health, resource utilization, and network performance.
